

“ GIS services through West Central Nebraska Development District allow Ogallala to utilize the technology at a substantially reduced cost compared to in-house staffing and software licensing or online GIS platforms.

We utilize the technology for a wide range of projects including traffic control, emergency management, nuisance abatement and capital improvements. With limited resources prioritizing capital improvements such as streets, and other utilities is essential. GIS helps us to better understand these priorities and budget accordingly.

The staff at West Central has proven to be very effective in completing detailed projects quickly and accurately. In addition, West Central helps City staff identify other uses that help us to utilize the technology to its fullest potential, saving time, money and providing better services to the community. ”

- Aaron Smith  
*Former Ogallala City Manager*

- Police Reports
- Road Conditions
- Street Signs
- Water Mains

## // Why GIS?

GPS/GIS technology has made understanding your communities infrastructure simpler, faster, and more efficient. Electronically storing data gives you complete asset history, as well as 24/7 access. Having the capability to visually compare past records with current conditions of assets not only leads to an overall better understanding, but also provides valuable planning insight.
